Best Idea For Presentation

Land Vision

Initial comparison file of development options for your land

Request no.	City / district	Plot area	Issue date
LV-0000	**Riyadh · sample district**	**9,600 m²**	**– / – / 2026**

Illustrative sample of a hypothetical plot with AI-generated images. All data and figures in this sample are for illustration only and do not describe a real plot.

01 · One-page summary

Three directions worth studying

Client goal: **develop the land**. We read the site, the available regulations and market indicators, chose three ideas that fit the plot size and context, and excluded a fourth.

1. Residential buildings around a courtyard

Residential context with services within walking distance.

2. Retail walk

Main-road frontage in a district short of services.

3. Office tower on a retail podium

Corner plot visible from two directions.

Conditional initial lean

Idea 1 (residential buildings) deserves study first, **provided** regulations allow four floors or more, as demand in the surrounding context is residential. If the main-road frontage allows commercial use, a mix of retail on the frontage and housing behind it is worth comparing.

An idea we excluded, and why

Villa compound: the area allows it in theory, but a frontage on a wide main road usually makes the land's commercial value higher than its villa value, and subdivision needs a separate plan approval. We would revisit it if your goal is selling to individuals.

How to read this file

Each idea has its own page: an image on your land, why it was proposed, its advantage, and **what to verify** before you base a decision on it. The status beside each item shows whether it comes from an official source or needs confirmation.

Official source · Needs confirmation · Not available

02 · Plot and site data

What do we know about the plot?

Item	Value	Source and access date	Status
Location	24.xxxx, 46.xxxx	Client link + Google Earth Pro · —/—/2026	Confirmed
Area and dimensions	9,600 m² · about 120 × 80 m	Client data + Urban Maps (Balady)	Confirmed
Plan / plot no.	Plan ---- / Plot --	Client data	Confirmed
Frontages	Main frontage on a road about 40 m wide; two side streets	Measured on Google Earth Pro	Approximate
National address	----	SPL (National Address)	Not sent

Surrounding landmarks and their effect

Landmark	Approx. distance	Effect on the ideas
Main mosque	About 150 m	Supports family housing and adds traffic at prayer times.
Existing shop row	Opposite, on the main road	Signals retail demand, and direct competition for any retail walk.
4-storey apartment buildings	On two sides	Suggests an accepted height in the district; to be confirmed in regulations.
Schools and hospital	Within 1.5 km (to complete)	Attracts families; verified on Urban Maps.

Our reading of the site

A corner plot with three frontages in a residential district with basic services. The main road gives strong commercial visibility, while the side streets allow quiet residential entrances. That is why residential, commercial and mixed ideas are all on the table.

03 · Available regulations

What is allowed, and what needs confirmation?

Item	What we found	Source	Status
Land use	Residential-commercial on the main frontage	Urban Maps · Balady platform	Official source
Permitted floors	To be completed from plot regulations	Urban Maps · Balady platform	Needs confirmation
Coverage and setbacks	To be completed	Plot building regulations	Needs confirmation
Required parking	Depends on the activity	Activity requirement guides · Ministry of Municipalities and Housing	Needs confirmation

In a real file we report what is shown for the plot as is, and mark what needs confirmation from the municipality or an engineering office before design.

04 · Market indicators

What do district transactions say?

– SAR
Average land price per m² (last 12 months)

–
Number of transactions in the district

–
Price trend vs previous year

–
Highest and lowest price per m²

Indicator	Reading	Source
Land transaction prices	Compared with the land purchase price to gauge what a project can carry.	Real Estate Exchange indicators · Ministry of Justice
Supply in the district	Apartment buildings and shops on the main road.	Site observation + Google Earth
Service gap	Few cafés and restaurants within walking distance.	Google Maps · needs verification

Limits of this reading: indicators help direct your thinking. They are reported as published and are not a valuation, and they do not replace a detailed market study of demand and expected unit prices.

05 · Idea 1

Residential buildings around a shared courtyard

Three mid-rise apartment buildings around a courtyard with a pool and children’s area, with entrances from the quiet side streets.

Why proposed?

- The surrounding context is residential, with the mosque and services within walking distance.
- Side streets allow quiet entrances away from the main road.
- An easy off-plan product for families.

Its advantage

The shared courtyard raises unit value compared with separate buildings on the same plot.

What to verify before deciding

- Permitted floors and coverage ratio for the plot.
- Prices and sales pace of new apartments in the district.
- Parking requirements for the number of units.

The image is an early concept of the idea on the plot photo, not an architectural design or approved plan.

06 · Idea 2

Open-air retail walk

Two rows of two-storey shops and cafés around a shaded pedestrian walkway, with parking on the main frontage.

Why proposed?

- Frontage on a busy main road.
- The dense residential district lacks cafés and restaurants within walking distance.
- Recurring rental income instead of a one-off sale.

Its advantage

Turns the plot into a daily destination for residents and raises frontage value.

What to verify before deciding

- Commercial use permission on the frontage.
- Required parking and the land it takes.
- Competition with the shop row opposite, and demand for retail space.

The image is an early concept of the idea on the plot photo, not an architectural design or approved plan.

07 · Idea 3

Office tower on a retail podium

An office tower on a three-storey retail podium, with a forecourt on the main road and parking behind.

Why proposed?

- A corner plot visible from two directions.
- The main road eases access for staff and visitors.

Its advantage

The highest use of buildable area if height is permitted.

What to verify before deciding

- Permitted height, the decisive factor for this idea.
- Office demand in this part of the city.
- Higher construction cost and longer development time.

The image is an early concept of the idea on the plot photo, not an architectural design or approved plan.

08 · Comparison

The three ideas side by side

Criterion	Residential	Retail walk	Office tower
Type of return	Off-plan sales	Recurring rent	Office rent or sale
Fit with context	High	Medium to high	Medium
Development complexity	Medium	Medium	High
Decisive constraint	Number of floors	Commercial use and parking	Height and office demand
Key market question	Apartment prices and sales pace	Rents and expected occupancy	Size of office demand

The ratings are descriptive to guide thinking; they are not return or cost figures.

Initial lean

Start by studying the **residential buildings**, and compare them with a **mixed** option (retail on the frontage, housing behind) if regulations allow commercial use on the main road. The tower is worth considering only if a high permitted height and clear office demand are confirmed.

09 · Next step

Who do you go to after this file?

1. **Engineering office:** confirm the final plot regulations (floors, coverage, setbacks, parking).
2. **Market and feasibility consultant:** compare return and cost for the two strongest options only, instead of studying every possibility.
3. **Graphics House:** architectural concept and marketing visuals of the chosen option, for a partner, financier or off-plan sales. **The fee for this file is credited against any later contract.**

10 · How we prepared this file

A first reading, not just images

This file is a first reading built on official data and sources and reviewed by an architectural team, to point your thinking in the right direction before you spend on detailed studies.

Stage	What we do	Source
1. Site reading	Boundaries, frontages, roads and surrounding landmarks.	Google Earth Pro · Google Maps · client photos
2. Regulations	Land use and the regulations available for the plot.	Urban Maps on the Balady platform (Ministry of Municipalities and Housing)
3. Market	Transaction price indicators and activity in the district.	Real Estate Exchange (Ministry of Justice)
4. Choosing ideas	Up to three ideas suited to size and context; ideas that do not fit are excluded with reasons.	Graphics House architectural team · 15+ years in the Saudi market
5. Visualisation	An image of each idea on your own plot photo.	Visualisation and AI tools, with human review
6. Comparison	Why each idea was proposed, what to verify, and a conditional lean.	Team analysis

Limits of this file

- Not a feasibility study; it does not set financial return or cost.
- Does not include a real estate valuation of the land or units; price indicators are reported as published by their official sources.
- Not an engineering design or approved plan; the images are early concepts.
- Final regulations are approved by the relevant municipality.
- Every item taken from a source states the source and access date.
